

What should I do if Preview 9.0 can't be opened?

When you try to open Preview 9.0, macOS may prompt you "Preview cannot be opened because it is from an unidentified developer." This is normal and expected.

To open Preview 9.0, [right-click](#) on the Preview app in Finder, and click "Open".

Then, you will see the option to open Preview 9.0.

I already right-clicked. Preview 9.0 still can't be opened?

If you right-clicked when opening Preview 9.0 for the first time, you need to right-click for a second time. If Preview 9.0 still can't be opened, [check your GateKeeper settings](#) under the General tab in System Preferences > Security & Privacy. Click "Open Anyway" to open Preview 9.0.

Why is my Mac blocking Preview 9.0 from opening?

Don't worry – Preview 9.0 will not harm your Mac. This alert only shows up because Preview 9.0 has been modified to be compatible with macOS Catalina.
